

## Web Application - Collection Management Solution

To solve the problems and to integrate information from different departments, such as sales, inventory and accounting departments it was decided to design a Collection Management system, which would make it easier to share corporate data and manage organization work flow across one single platform.

The system displays the information for each product in the store and compares it to other similar items. It also helps monitor purchase order lifecycle. With the help of the solution it is considerably easier to order goods remotely, to make reports and manage new information about this or that item.

## Project Resume

Business model: Time and Material

Development model: Scrum/Agile

Project workload: More than 3000 man-hours

Technology domains: Software Architecture, n-tiers Web Applications, Web Services, Linux

Languages: Oracle Database Server, Oracle AS, JJ2EE, Flex(Flash), DHTML(HTML, CSS, JavaScript), SQL
